

**0025****Improving Vibrating-Wire Noise Immunity Using Spectral Analysis**[Print](#)**Reviewer #1**

Comments 1. Please add Figure titles for Fig.13 and Fig.14.

2. Since the conference is Fatigue and Fracture related, it would be good to have some example or explanation for fatigue cyclic stress measurement with existence of noise.

---

**Reviewer #2**

Comments This paper is well written and provides background and application for use of the vibrating wire strain gages for long term measurements on a steel and a concrete structure
